Learning objectives

- Identify key sources of heterogeneity in psychedelic-assisted therapy (PAT) practice and data collection.
- Apply the Delphi method to PAT research, using iterative rounds of online surveys and pseudo-anonymous debate to reach expert consensus on key data domains.
- Examine findings from the first two rounds of a multi-round study, reviewing areas of clear consensus and approaches to clarifying points of contention.

Elisabeth Irvine is an MSc student in McGill's Master's of Mental Health program under the supervision of Kyle Greenway, MD. She has coordinated research across multiple social and clinical psychology laboratories at McGill University, including the Psychosocial Research Rounds. Her work focuses on social determinants of outcomes in psychedelic-assisted therapy. She intends to pursue a PhD in Clinical Psychology.
